

RAZYR

Razyr

Hammer Razyr - Slice the Competition!!!

Hammer is excited to offer a unique twist on ball reaction to the bowling industry. Developed by our team of design engineers, this brand new combination of a High-Density 3-Piece pancake core and our aggressive Recoil Reactive coverstock will put a new spin on dry lane condition ball reactions.

Our brand new Recoil Reactive coverstock gives the user more hook and hitting power than any ball ever made in a 3-piece core configuration.

The Hammer Razyr offers a simple approach to layout and drilling techniques. For aggressive ball motion on medium-dry to dry lane conditions simply follow the instructions on the back of this page.

Tuning Ball Motion:

The coverstock used on the Hammer Razyr will provide aggressive hook motion on dry lane conditions. However, it is important to keep in mind that all bowlers have different needs. The Razyr coverstock can easily be sanded to a rougher grit for stronger hook motion in oil or polished for more length, more aggressive breakpoint and less total hook. Please consult your pro shop operator for additional assistance in tuning ball motion.

Ball Care:

It is imperative to maintain your new Hammer Razyr by cleaning the coverstock immediately after each bowling session using bowling ball cleaning products designed for reactive balls. Hammer highly recommends POWERHOUSE ENERGIZER BALL CLEANER applied with a micro-fiber towel to remove the dirt and oil from the surface of the ball.
